

# Weintek Remote IO (CANopen)

Supported series: Weintek Remote IO (iR-COP)

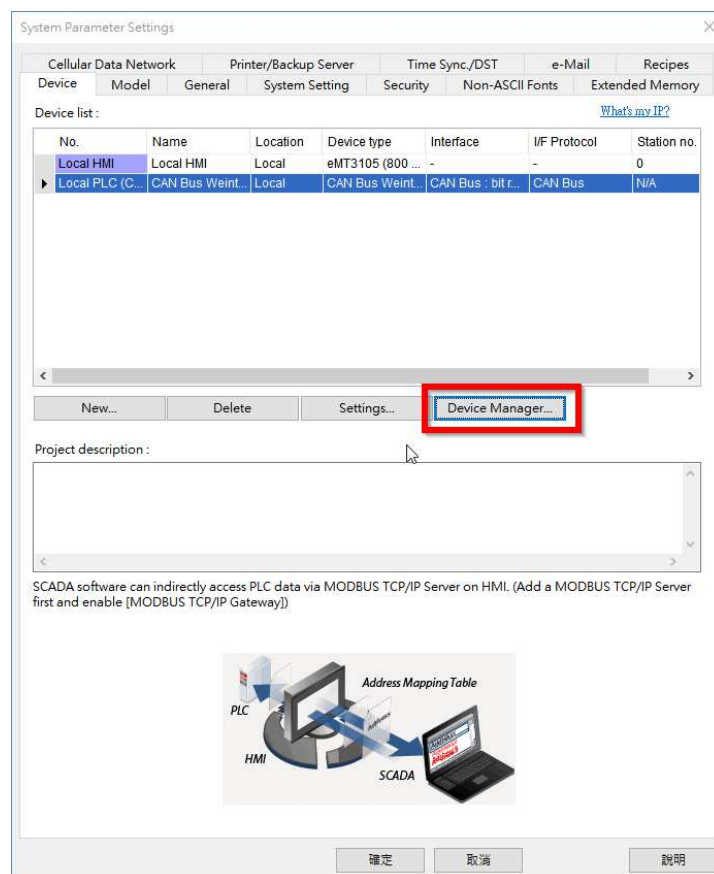

## HMI Setting:

Parameters	Recommended	Options	Notes
PLC type	Weintek Remote IO (CANopen)		
Baud rate	250K	10K~1M	

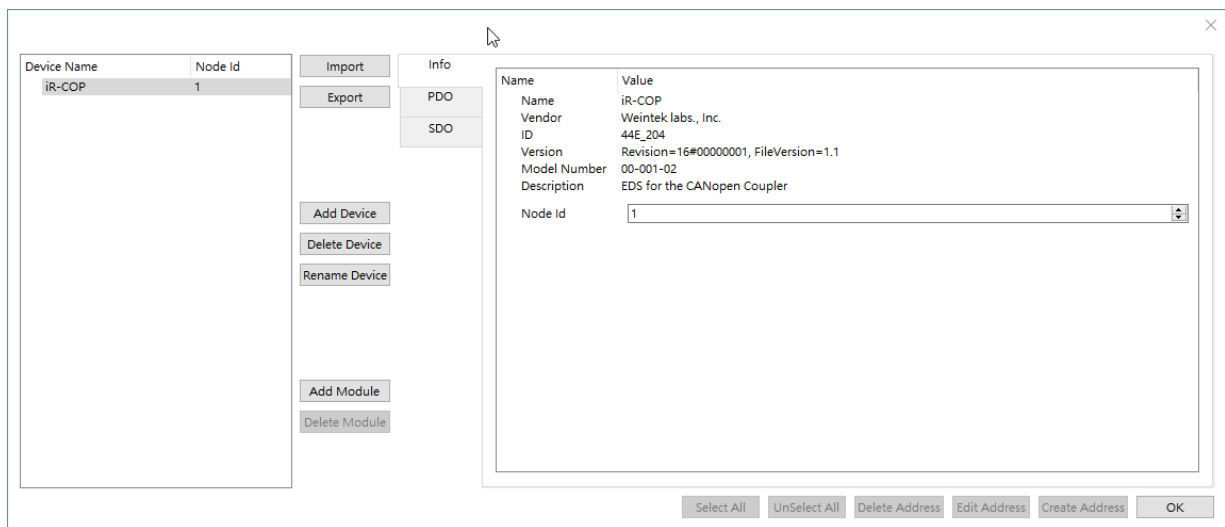

Online simulator	NO	Extend address mode	NO
------------------	----	---------------------	----

## Device Setting:

1. Launch EasyBuilder Pro and add **Weintek Remote I/O (CANopen)** driver into the device list, Click **[Device Manager]** to configure CANopen device and addresses.

2. In Device Manager window, a Weintek Remote I/O CANopen device can be found by default.

3. Clicking the buttons on the left side can:

**Import:** Import the predefined .wtco file into the device list. Please note that current device list will be overwritten by the imported list.

**Export:** Export current setting as a .wtco file for future use.

**Add Device:** Add a new Weintek Remote I/O CANopen device.

**Delete Device:** Delete the selected Weintek Remote I/O CANopen device.

**Rename Device:** Change device name.

**Add Module:** Weintek Remote I/O supports the following modules.

Item	Model	DeviceId	Describe	Type	Input Points	Output Points	Output Mode	Input Mode
1	iR-DI16-K	0x0154	16DI	DI	16	0	N/A	Source+Sink
2	iR-DM16-P	0x0351	8DI8DO_P	DI+DO	8	8	Source	Source+Sink
3	iR-DQ16-P	0x0251	16DO_P	DO	0	16	Source	N/A
4	iR-DM16-N	0x0352	8DI8DO_N	DI+DO	8	8	Sink	Source+Sink
5	iR-DQ16-N	0x0252	16DO_N	DO	0	16	Sink	N/A
6	iR-DM16-R	0x0353	8DI8DO_R	DI+DO	8	8	Relay	Source+Sink
7	iR-DQ16-R	0x0253	16DO_R	DO	0	16	Relay	N/A
8	iR-AI04-VI	0x0425	4AI	AI	4	0	N/A	Votage/Current
9	iR-AQ04-VI	0x0525	4AO	AO	0	4	Votage/Current	N/A
10	iR-AM06-VI	0x0635	4AI2AO	AI+AO	4	2	Votage/Current	Votage/Current
11	iR-AI04-TR	0x0426	RTDTC	RTD/TC	4	0	N/A	RTD/TC

Adding modules can show address information correctly.

**Delete Module:** Delete the selected module.

## Tags

**Info:** Shows device information. Node ID can be changed within 1~127.

**PDO (Process Data Object):** This tab displays TxPDO and RxPDO Mapping for editing. Please note that changes in PDO tab will not be updated to Remote I/O. The purpose of editing PDO Mapping here is to ensure correct bit length when importing addresses to HMI, and that the displayed address names on HMI match those used in CANopen.

The five buttons at the top of the PDO tab can:

- **Add Mapping:** When the PDO object's bit length is less than 64, the user can add PDO Mapping into the list.

The screenshot shows the PDO tab interface with a table of mapping objects. The table has columns for Name, Object, BitLength, and Address. The row for '16#1401 2. receive PDO parameter' is highlighted in blue, and a red box is drawn around it. The 'Add Mapping' button is highlighted in the top toolbar.

Name	Object	BitLength	Address

<input type="checkbox"/> 16#1405 6. receive PDO parameter	16#0	0	

Select source of Mapping Object.

The screenshot shows a dialog box for selecting a source of a mapping object. The dialog has a table with columns for Index:Subindex, Name, Access Type, Type, and Default. The row for 'Ouput8 20H-27H' is selected. Below the table, there are input fields for Name, Index, and Subindex, and buttons for OK and Cancel.

Index:Subindex	Name	Access Type	Type	Default
16#6200	write digital output 8-bit			
:16#01	Ouput8 0H-7H	RWW	USI...	16#0
:16#02	Ouput8 8H-7FH	RWW	USI...	16#0
:16#03	Ouput8 10H-17H	RWW	USI...	16#0
:16#04	Ouput8 18H-1FH	RWW	USI...	16#0
:16#05	Ouput8 20H-27H	RWW	USI...	16#0
:16#06	Ouput8 28H-2FH	RWW	USI...	16#0
:16#07	Ouput8 30H-37H	RWW	USI...	16#0
:16#08	Ouput8 38H-3FH	RWW	USI...	16#0
:16#09	Ouput8 40H-47H	RWW	USI...	16#0
:16#0A	Ouput8 48H-4FH	RWW	USI...	16#0

:16#10	Ouput8 78H-7FH	RWW	USI...	16#0
:16#11	Ouput8 80H-87H	RWW	USI...	16#0
:16#12	Ouput8 88H-8FH	RWW	USI...	16#0
:16#13	Ouput8 90H-97H	RWW	USI...	16#0

Name: Ouput8 20H-27H

Index: 16#6200 BitLength: 8

Subindex: 16#5

OK Cancel

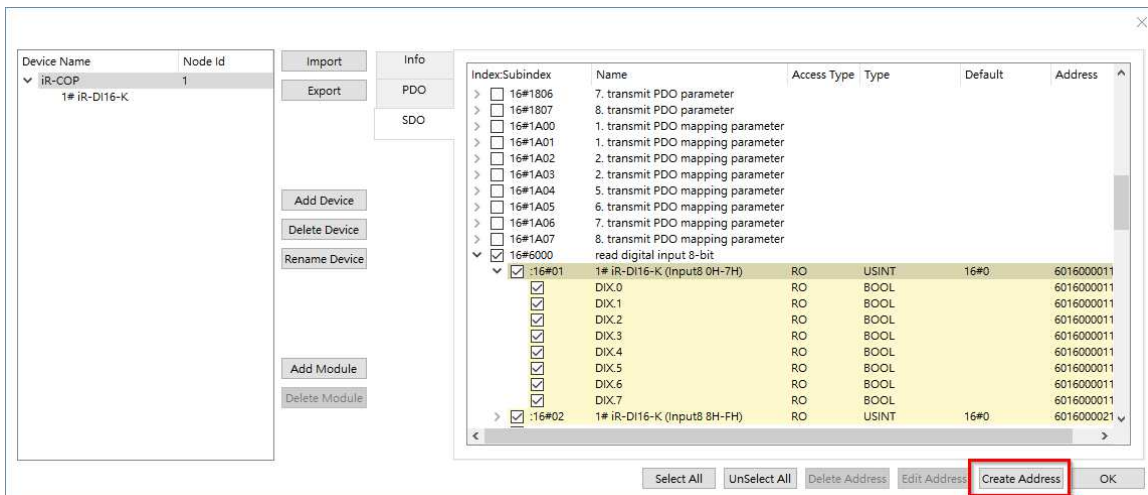

- **Edit:** Change the source of the selected Mapping Object.
- **Delete:** Delete the selected Mapping Object.
- **Move Up:** Move the selected Mapping Object one row upward.
- **Move Down:** Move the selected Mapping Object one row downward.

**SDO (Service Data Object):** Displays all items in Object Dictionary.

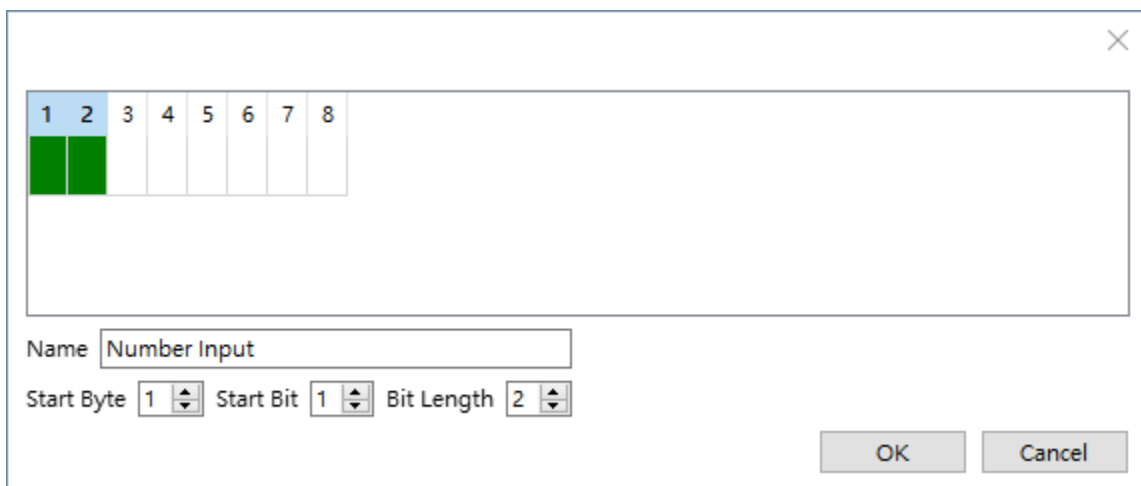

## Selecting and Defining Addresses

Users can define address range of the existing items.

For example, to add a user-defined address range under item **[6000] read digital input 8-bit #01** in SDO tab, select the item in the index tree and then click [Create Address].

A dialog box pops up for defining address range. Using the same settings below will add a **Number Input** tag under item **[6000] read digital input 8-bit #01**. The tag will use bit 1~2 of the item as its value. That is, if the value in the item is 15, the value in the tag will be 3.

The buttons at the bottom of both SDO and PDO tab can:

- **Select All:** Select all items.
- **Unselect All:** Unselect all items.
- **Delete Address:** Delete user-defined address.
- **Edit Address:** Edit user-defined address.
- **Create Address:** Create user-defined address.
- **OK:** Import addresses.

## Wiring Diagram:

### Diagram 1

<b>cMT Series</b>	<b>cMT-3151</b>
<b>eMT Series</b>	<b>eMT3070 / eMT3105 / eMT3120 / eMT3150</b>
<b>MT-XE</b>	<b>MT8092XE</b>

To minimize signal reflection on the CAN bus network, termination resistors should be installed at both ends of the network, as shown in the following figure. (eMT3070A has built-in termination resistor, so it is not required for eMT3070A)
